## AAU I want to be able to build a decklist by searching for cards and adding them to the list

Build UI to give deck a name, select format, and search cards by name. Cards added will be displayed below and formatted based on card type.

*Icebox - Add additional options for filtering card search by colour, type, subtype, cost, etc.

## AAU I want to be able to view the decklists I have created

Build UI that will list decks created by the authenticated user. Gives ability to edit or delete existing lists.

*Icebox - Add additional options for sorting lists by various categories (ie format, colour, etc.)

## AAU I want to be able to view decklists created by other users

Index View will show list of all decks that have been created by all users

*Icebox – Add a rating system so that index page only shows top rated decklists
